DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7 and 11-17, drawn to a semiconductor substrate and a semiconductor device, classified in class 428, subclass 446.
- II. Claims 8-10, drawn to a method of manufacturing a semiconductor substrate, classified in class 438, subclass 481.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case The product can be made by a materially different process such as growing a separate insulation layer on top of the single crystal silicon layer rather than oxidizing the single crystal silicon layer.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to the offices of Harness, Dickey & Peirce on January 3, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
